Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, drawn to a pair of probes for detecting protein nuclear transport.

Group II, claim(s) 5, 6, 8-10, and 12, drawn to methods of detecting protein nuclear transport modulators in an isolated cell.

Group III, claim(s) 5-13, drawn to methods of detecting protein nuclear transport modulators in an cells within a live animal or its progeny.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The only shared technical feature of Groups I-III is a pair of probes for detecting protein nuclear transport. However, this shared technical feature is not a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the art as a pair of probes for detecting protein nuclear transport

as claimed is taught by Kim et al. (2004, Reference AO of applicants IDS of 12/06).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
